

A network diagram consisting of several nodes (circles) connected by lines, set against a blue background. The nodes are arranged in a roughly circular pattern, with some lines crossing each other. The nodes are light blue with a yellow center, and the lines are light blue.

ACCESS CONTROL

WHEN SECURITY MATTERS

MAVIN
TECHNOLOGIES

THE MAVIN ADVANTAGE

Mavin Technologies is a leading Access Control Software company. Founded in 1994 as a unit of LITTON Scientific, MAVIN Solutions are designed for both SMB or enterprise applications. Now in its fourth generation and with no customer ever left behind, MAVIN delivers smart, secure, simple to configure and and easy to use, access control systems that achieve the highest reliability and operational performance.

Mavin Software Platform is comprised of modules for access control, people and credential management, alarm monitoring, action and event scheduling, front desk identity verification, and real-time device status monitoring.

We think you will agree that MAVIN provides the market with the best choice for Access Control. Our most popular solution set for new customers includes MAVIN Software, AZURE Hardware, and robust integration capabilities.

MAVIN Customers tell us - our knowledge, process and follow through for customer service is innovative and unusually comprehensive, providing the highest Return on Investment and reducing Total Cost of Ownership.

Mavin Technologies is known for comprehensive, customizable access control management solutions - and the best customer service and support. These are just a few of the markets we serve.

CULTURAL PROPERTY

The security of a cultural institution takes a level of vigilance that most institutions don't require. From irreplaceable artifacts to priceless works of art to the hundreds or thousands of patrons coming through your doors, you have to be able to take immediate action regardless of the security situation.

COMMERCIAL

Whether you're open for business or closed for the night, you need to feel confident that your assets are secure 24/7/365. That means your access control and alarm systems, video surveillance, and fire alarms must provide you with real-time access, so you can be alerted immediately to any strange activity or unusual situation, and be able to take decisive action on everything from parking issues to a break-in.

FINANCIAL INSTITUTIONS

From day-to-day operations to the customers waiting in line in the lobby, the security of your financial institution is a significant responsibility. Not only do you need to be able to follow the money from deposit to armored vehicle, you must know that every system that protects the assets and people within your walls is doing its job.

CANNABIS

The budding cannabis industry has security concerns all its own. From ever changing regulations to redundancy requirements to data storage; you can confidently secure your remote grow facility, distribution center or urban retail outlet.

HIGHER EDUCATION

The toughest job on campus is ensuring the safety of thousands of students, faculty and staff while managing facilities, multiple databases and evolving credentialing technology. Higher education challenges include securing multiple campuses and buildings, research laboratories, sports arenas, dormitories and other student housing, as well as on campus amenities such as restaurants, fitness facilities, and retail stores. Add to that a cardholder population that churns 3-4 times per year.
