

# Holistic Integrated, Access and Automation Software Platform

Mavin Integrated Software Platform offers fully featured and smartly integrated software for access control, devices from TAGS, the Internet of Things, REST Open API feeds, identity management, credentials issuance, alarm monitoring, event scheduling, interactive graphical maps, real-time device status monitoring, and reports.

Our TAG Objects Infrastructure, an innovation developed by Mavin, allows security and business system integrations to come to life in the Mavin user interface and automate system processes. “Any” input from an application or device can interact at any level with other integrations. Through TAGs and our Open API, customers can interact with a single User Interface (UI), realize the best Customer Experience (CX), and avoid intolerable costs for version-to-third-party hard-code integrations that require continuous updates, investing, and testing.

Release the power of workflows and automation, build untapped capabilities, and collaborate with HR, Risk Management, Enterprise Operations, IT, and other software or devices. Enable security to enhance business value, improve productivity, and execute the best controls.

## Let Mavin Take You Further!

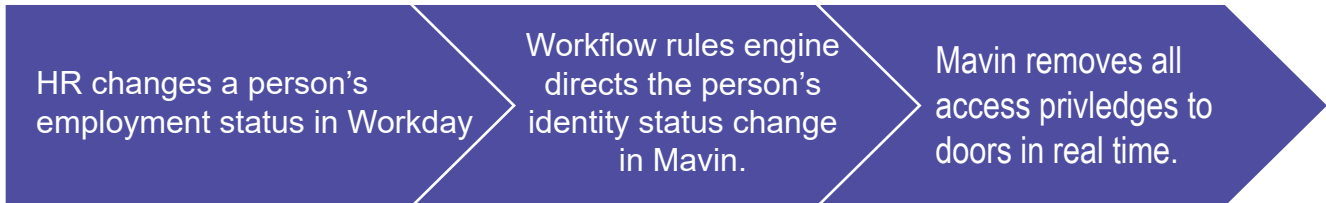

Integration Tools	Mavin TAGs, REST Open API Mavin IOT
Business Software	Workday, ServiceNow
Infrastructure	MS Windows, MS SQL
Server & Client Environments	On-Prem, AWS, Azure, VMWARE
Workflow 3rd Party	Oloid
HR & Identity	ADP, OKTA, KRONOS
Training & Compliance	Intertek-Alchemy
Visitors	Envoy, Zendesk
Mass Notification	Everbridge, Titan HST
PACS Hardware	AZURE (OSDP), Mercury (installed legacy boards are supported) Proxess (soon)
Key Cabinets	Deister Electronic
Video Management Software	Milestone Xprotect, Hanwha (soon)
Asset Tagging	Aruba (soon)

Talk to us about integration needs for any 3rd party SW application with an Open API!

# A Few Examples of Integration, Workflows, and Automation

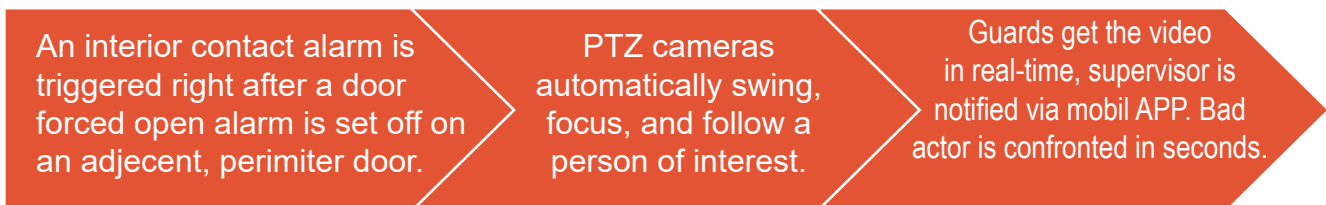

## Single Source of Identity Truth

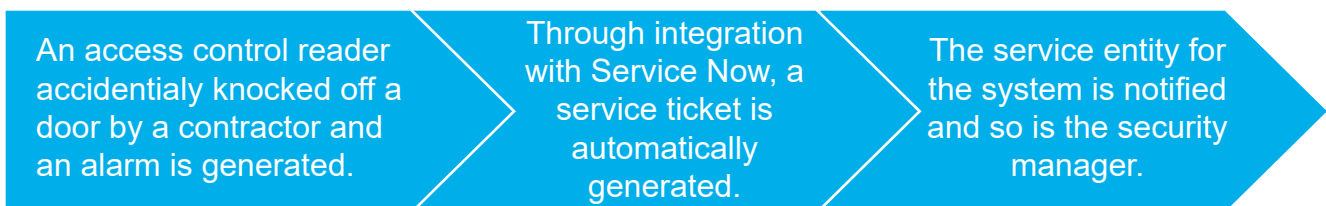

## Single Pane of Glass for Access Control

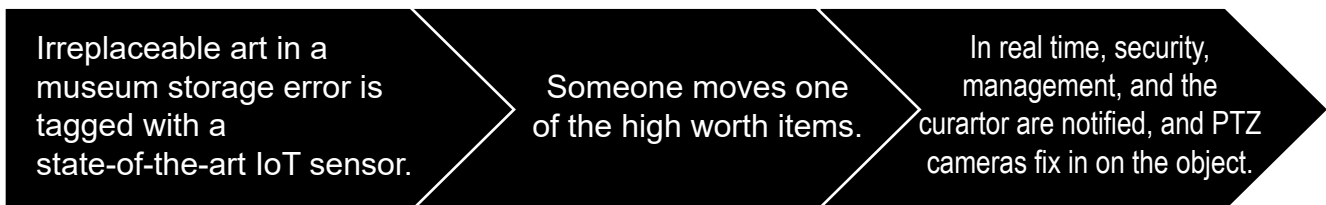

## Automating Event Workflows

## Automating Service Tickets

## Enabling Internet-of-Things Sensors
