

# MAVIN SECURITY MANAGEMENT PLATFORM

## Access control that's designed with you in mind

Mavin's access control platform is built on cutting-edge software and hardware technology, and leverages the expertise and intelligence of the industry's best manufacturers, system integrators, and end users. Its foundational architecture seamlessly integrates modules for access control, people and credential management, alarm monitoring, action and event scheduling, graphical maps, front desk identity verification, and real-time device status monitoring.

## Open, scalable platform

The Mavin security management platform enables customers of all sizes and across industries to secure their people, assets, and facilities using industry-standard technologies from leaders such as Microsoft, Mercury Security, HID, and Allegion. Mavin allows customers small or large to build their systems to meet their current needs and then lets them seamlessly grow their systems as their needs evolve.

## Easy to use, easy to maintain

The Mavin Security Management Platform provides an "all-seeing" view that is fully adaptable and designed to work for its system users, providing them with a relaxed and pleasant user experience. Mavin is simple to install, easily integrates into existing network infrastructures, and has intuitive user interfaces that are fully preference-driven, so each individual system user has a customized UI to maximize interaction with the system.

## BENEFITS

Easy-to-use interface  
reduces learning curve

Competitively priced  
systems improve ROI

Open platform leverages  
field hardware and other  
3rd party investments

Integration with leading  
complementary systems  
delivers total solution

Windows architecture  
provides proven foundation

Concurrent client licensing  
lowers overall TCO

## CAPACITIES

2,000+ card readers

1 million cardholders

Years of audit retention

50 concurrent clients

Mavin is built on an industry-standard Windows-based platform

# SECURITY DESIGNED WITH YOU IN MIND

## FEATURES

Intuitive user interface

Alarm monitoring

Credential management

Graphical maps

Real-time status monitoring

Scheduling utility

Advanced reporting

Front desk cardholder verification

User-based UI persistence

## CUSTOM SERVICES

Custom scripting

Cloud-based backups

Personalized reports

System health checks

HR/Identity integration

## Third-party integration capabilities

Mavin's open architecture design and advanced integration engine allow for third-party integrations and plug-ins to digital video, intrusion detection, and fire systems, letting customers leverage existing investments in these technologies while providing a more complete, all-seeing solution that gives customers both a comprehensive system status overview and complete control over their security operations.

## World-class customer service

Mavin's products are backed by a customer-first service culture where common sense always supersedes corporate policy and customer needs come first. Mavin employees come from a diverse background of manufacturers, value-added resellers, and system users, giving the company insight into wants, needs, and pain points from all stakeholder angles involved in mission-critical applications.

## Support for open-field hardware

Mavin products support open-field hardware from leading manufacturers such as Mercury Security, allowing organizations to leverage existing investments and support industry-standard door hardware and card readers, including smart cards, prox technologies, magnetic stripes, and bar-codes.
